CASE STUDY 01

Community Learning Access Programme ? Karachi

PROBLEM

Low-income neighbourhoods lacked safe, structured after-school learning. Children who had dropped out of formal schooling had no bridge back into classrooms, and parents had no trusted local point of contact with educators.

ACTION

Designed and coordinated evening learning circles run by trained volunteer tutors, mobilised community mothers as programme ambassadors, and aligned the curriculum with the national syllabus in Urdu and English. Introduced attendance registers, monthly progress checks and a referral pathway back into formal schools.

OUTCOME

Steady enrolment across participating centres, improved regular attendance among enrolled children, and a repeatable operating model ? documentation, tutor guides and reporting templates ? that could be handed to partner organisations without loss of quality.

ROLE

Programme design, volunteer tutor training, community mobilisation, monitoring & reporting (NGO Project Manager, 2014?present).
