CASE STUDY 03

Science Outreach & Assessment Quality ? Secondary Education

PROBLEM

Chemistry and physics were perceived as difficult and abstract by secondary students, while examination marking at board level showed variation between examiners that weakened confidence in results.

ACTION

Organised science exhibitions and hands-on demonstrations to make experiments visible and repeatable; contributed experiment-driven articles to the monthly Amali Science Magazine; co-authored reference-book chapters for Class 9 Pakistan Studies and Class 10 Physics; and served as Deputy Head Examiner for Chemistry Practical (SSC), running standardisation sessions for examiners.

OUTCOME

Higher engagement with practical science among participating students, widely used reference material in two languages, and more consistent, defensible marking standards at examination level.

ROLE

Deputy Head Examiner of Chemistry Practical, S.S.C Examination (2011?2016); publications contributor; science exhibition organiser.
